What's hot: Best web browser on a mobile phone, elegant multi-tasking What's not: Portrait orientation not available in most apps, WiFi kills battery life.. The phone has WiFi with seamless switching between WiFi and cellular data networks (no there's no UMA calling but there is VoIP), Bluetooth 2.

The User interface is impressively modern, slick and fun with its cool sound effects, animations and transitions, and the ARM Cortex A8 with GPU is very fast.. In fact, there's a setting that automatically launches the phone app when you turn the phone to portrait mode.. 1 + EDR with a full set of profiles and a GPS that works with Nokia's own Ovi Maps.. 3 From the author, Toni Nikkanen: "I believe this makes the N900 the first smartphone ever to run a full version of Mac OS X (at any speed, slow or otherwise).. Maemo is a Linux-based OS, and prior versions powered Nokia's non-phone Internet tablets like the N770, N800 and N810.

T-Mobile users: this is definitely a phone worth looking at! We don't see that many cutting edge, high end phones with T-Mo's US 3G bands and it's pleasantly surprising that Nokia made one since they usually opt for the larger installed base of AT&T users and their 850/1900MHz bands.. Rovaani writes "There is a video floating around of a Nokia N900 smartphone running the full desktop Mac OS X 10.

### **nokia 3**

6 28 077-rc7/armel files into Nokia N900/File Manage—Nokia N900) Please i need your help to get out from this problem.. You can also get to the phone app when in any application by quickly pressing the power button and selecting 'phone' from the pop-up menu.. What is the N900 and what is Maemo?While the N900 certainly is easy to use (and don't be fooled by the Linux underpinnings— the iPhone, Palm's webOS and Android all use some form of Unix or Linux inside), it's a hard smartphone to pidgeonhole.. Nokia seems to be doing great on the smartphone market and such things can only improve N900's reputation.. The N900 is in some ways a developer's platform since it's Nokia's first foray into what may become the eventual replacement OS for Nseries high end phones, but that doesn't mean it requires a degree in computer science or that it's not a pleasant product to use.. It has 3G HSDPA 10 Mbps on the Euro 2100MHz band and on T-Mobile's US AWS 1700/2100MHz bands.. Do you use AT&T? You'll get EDGE for data but not 3G since the N900's cellular radio doesn't support those bands..
